

AI Connect

Cohesive connectivity and data mobility for enterprise AI.

AI Connect bundles interconnection, internet, networking, and data mobility services to support AI training, inference, and advanced compute across hybrid infrastructure. AI Connect solves diverse connectivity requirements for AI workloads across enterprise data and edge environments through a unified federated platform.

Why AI Connect?

AI success depends on securely moving data, providing low-latency access to AI resources, and connecting distributed environments without added complexity or cost. AI Connect delivers a scalable network that enables secure data movement and reliable connectivity across enterprise, cloud, GPU, and edge environments.

AI Connect Benefits

Enable Secure Data Mobility

Move large-scale datasets between enterprise environments, storage platforms, AI service providers, and cloud environments while maintaining governance, security, and control.

Accelerate AI Model Training

Deliver high-bandwidth, low-latency connectivity to hybrid infrastructure platforms, AI ecosystems, GPU-as-a-Service providers to support data-intensive model development.

Support AI Inference at the Edge

Extend AI capabilities closer to users, devices, and operational environments with low-latency connections that enable real-time inference and decision-making.

Eliminate AI Infrastructure Complexity

Replace fragmented networks and multiple service providers with a unified connectivity platform that streamlines AI deployment and operations.

Scale AI Without Rebuilding Networks

Provision additional bandwidth, connect new AI resources, and expand into new locations without lengthy deployment cycles or significant capital investment.

AI Connect Service Offerings

Create a scalable AI network architecture that accelerates model training, supports edge inference, and streamlines data mobility by utilizing traditional cross connects and on-demand provisioning via the Csquare Digital Exchange. Customize your AI Connect bundle with the following services:

Ecosystem Connect

Cabling, connectors, and patch panels connecting your colocation environment to the Csquare Meet-Me-Room (MMR) for interconnection, enabling the deployment of cross connects within 2 business days.

Exchange Port

Two single-mode fiber cross connects for full redundancy to link your colocation environment to the Csquare Digital Exchange fabric. This opens the door to instant provisioning of connections to internet, clouds and other Csquare ecosystem providers.

Metro Connect Dedicated

Connect between Csquare data center with private, high-speed optical network connectivity.

Physical, Virtual or Hybrid Cross Connects

Establish private connections with other Csquare customers and service providers utilizing traditional cross connects, virtual cross connects via our Csquare Digital Exchange or a combination of both.

Whatever you need,
we are here to help.

Got questions about our services? Looking for space and power availability? Need pricing? Want to schedule a tour? Drop us an email or give us a call.
