

Csquare Digital Exchange™

Fast, agile connectivity to optimize your infrastructure.

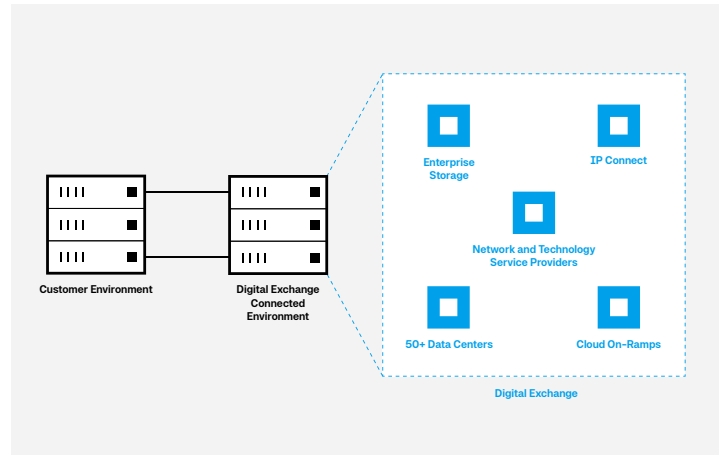

The Csquare Digital Exchange, a flexible, software-defined platform, simplifies and enhances connectivity across multiple environments, accelerates provisioning, and improves network performance within and beyond the data center for our colocation customers.

How It Works

The Csquare Digital Exchange enables seamless VLAN extensions within facilities, to cloud on-ramps and ecosystem providers, and across metro regions. With a single redundant Exchange Port, customers can generate secure, high-performance connections on demand from their cabinets or cages.

Install in three easy steps

1. Connect your colocation environment to the Csquare Digital Exchange via the Exchange Port service. The Exchange Port provides two single-mode fiber cross connects to diverse Csquare Digital Exchange hardware for full redundancy.
2. Order desired Csquare Digital Exchange services via the Csquare Portal. Select the applicable bandwidth speed and features that best suit you.
3. Once you submit the order, the service(s) you selected are provisioned instantly! You can manage your service(s) at any time within the Csquare Portal.
