

Green Power Advantage

Support your organization's sustainability goals with our Renewable Energy Certificates program.

Green Power Advantage offers a trusted, audit-ready way to support our customers' sustainability goals by matching your contracted data center power usage with Renewable Energy Certificates (RECs). We procure and retire RECs for you and provide annual attestation for your reporting requirements.

Why Choose Green Power Advantage?

Verified Defensible Impact

RECs are the accepted, market-based instrument for proving renewable electricity claims in the U.S. Each REC represents 1 MWh of renewable energy generation and is retired on your behalf to prevent double counting. Annual attestation documentation supports audits, compliance disclosures, and internal reporting.

Standards Based Sustainability

Match your IT load in our data centers with renewable energy through nationally recognized renewable energy credits. The program allows our customers to substantiate renewable energy use without implementing infrastructure changes or longer-term power strategies.

Quick Green Power Advantage Facts

Availability

- Offered at all U.S. sites
- Uniform pricing based on national REC markets
- Regional REC options available
- Minimum power commitment:
 - Allocated power: 200 kW
 - Metered power: 250 kW

Reporting and Transparency

- Annual attestation report available upon request
- Designed to support ESG disclosures and internal sustainability reporting
- Customers retain control over how claims are reported or disclosed

Designed for Real-World ESG Reporting

Green Power Advantage aligns with common sustainability and disclosure frameworks, including:

- Scope 2 market-based emissions accounting
- ESG and sustainability disclosures
- Customer, investor, and stakeholder reporting requirements

Flexible Integration

Green Power Advantage can be added at contract start, anniversary, or renewal to align with your evolving sustainability, environmental, and governance priorities.

How It Works

- 1 REC = 1 MWh of renewable energy generation
- REC volumes calculated based on contracted power or usage
- RECs are procured and retired annually through Csquare's utility provider
- Retirement prevents double counting and supports credible renewable energy claims

Pricing

- Monthly add-on based on contracted power
- Metered customers billed per kWh
- Pricing adjusts annually based on REC market conditions

Credibility You Can Stand Behind

The Csquare Green Power Advantage program validates credible renewable energy use claims and supports Scope 2 market-based emissions reduction via transparent REC procurement and retirement. It also reinforces our commitment to help customers advance sustainability goals with confidence.

What's Driving REC Adoption?

Industries including financial services, software and digital services, telecommunications, and other data-intensive organizations use RECs to align data center energy use with regulatory, governance, and reporting expectations.

Common drivers include:

- Progress toward corporate sustainability and net zero goals
- Tracking Scope 2 emissions from electricity in alignment with the Greenhouse Gas (GHG) Protocol
- Alignment with ESG disclosure and investor reporting requirements
- Policies requiring consistent emissions treatment across owned and third-party facilities
- Simplified compliance for international organizations navigating U.S. green power markets
- Audit ready documentation to support renewable energy and emissions reduction claims

Whatever you need,
we are here to help.
