

IP Connect

Deploy robust internet connections in real-time for your Csquare data center environment.

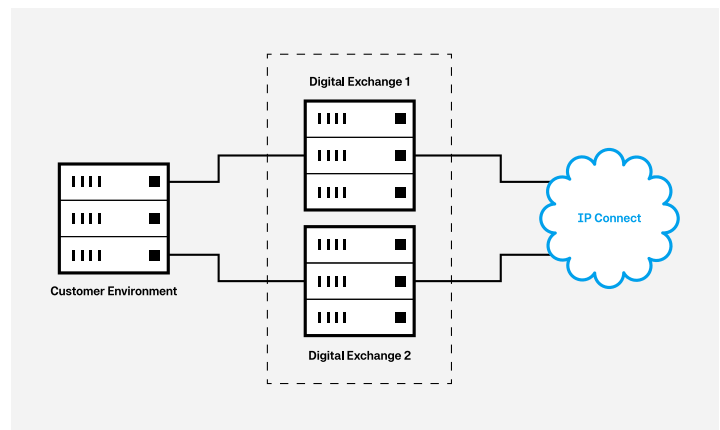

IP Connect provides customers with dedicated, high-performance internet connectivity instantly to their Csquare colocation environments. Leveraging automated routing protocols, this on-demand service ensures optimal reliability and uninterrupted connections by intelligently distributing your traffic across multiple upstream providers. With speeds ranging from 10 Mbps to 10 Gbps and fully redundant architecture, customers gain a resilient, scalable internet service that enhances network efficiency and eliminates the complexity and cost of managing multiple providers.

How It Works

Powered by the Csquare Digital Exchange™, IP Connect allows customers to immediately provision fault-tolerant internet service and scale on-demand as needed via the Csquare Portal.

Install in three easy steps

1. Connect your colocation environment to the Csquare Digital Exchange via the Exchange Port service. The Exchange Port provides two single-mode fiber cross connects to diverse Csquare Digital Exchange hardware for full redundancy.
2. Order IP Connect via the Csquare Portal. Select the applicable bandwidth speed and features that best suit your business.
3. Once you submit the order, the service is provisioned instantly! You can manage your service at any time within the Csquare Portal.

IP Connect Benefits

High performance, low latency

Automated routing delivers rapid connections via the best available path at any given time. Monitor real-time performance via the Csquare Portal.

Quick integration with existing network

Easily incorporate IP Connect into your existing network infrastructure by bringing your own IPv4 or IPv6 public addresses. Add Border Gateway Protocol (BGP) for complete control over your network advertisement.

Bandwidth that flexes with your demand

Predictable monthly fixed bandwidth pricing and the option to burst to support fluctuating business demands.

Simplified remote management

Allow multiple devices to connect to the internet through a single public address for remote access to your organization's servers and network—eliminating the need for address renumbering as your network evolves.

Guaranteed uptime

Our blended IP service combines internet access from multiple Tier 1 providers for a superior, more resilient connection versus a single-provider solution.

Full support from a single provider

Csquare technicians support the entire connection—cross connect to internet—24x7 with services conveniently billed to your existing Csquare statement, eliminating the need for multiple contracts or support tickets.
